

Live Streaming

from any location on the planet

It's live but in a different way

What is **live streaming**?

Live streaming is a great way to expand your event audience beyond the physical walls of the venue. Typically a live video feed is sent to a social media platform such as YouTube or Facebook, allowing an almost limitless amount of viewers to experience the event in real time. The benefits of using a platform such as YouTube or Facebook is that they are extremely stable and able to cope with millions of viewers.

However, these platforms may not be suitable for events that require a more secure platform, specifically a private stream to an invite only audience. In this instance **Noba can provide a private CDN (Content Delivery Network) and custom player** which replaces the likes of YouTube or Facebook, but is equally stable and still allows mass viewing simultaneously.

As well as main and backup streaming hardware for resilience, a quality live stream also requires a stable and robust internet connection. As experts in connectivity this is something we can also provide as part of our end to end streaming service.

Given how critical the internet connection is to a live stream, we always recommend a main and backup connection via two separate internet providers, for example a dedicated lease line as the main source and a satellite broadband connection as a backup. But don't worry, the Noba team will cover all of the technical elements, enabling you to focus on your event.

Who are Noba and why work with us?

We are Noba event WiFi and we have been connecting the live events industry for over 20 years.

We have also been live streaming events for many years, and the Noba team have learned to stream from pretty much any location on the planet. We've even streamed from a racing yacht out at sea!

As the world of communication has been changing, the live events industry has been adapting and, live streaming has become the go to solution for ensuring the wider audience is still reached. As well as providing crystal clear, cutting edge streaming services, Noba can also deliver bullet proof internet connectivity from 5Mbps to 10Gbps. All of our connections come with seamless failover options and can be installed in as little as 24hrs, to ensure uninterrupted perfect streaming every time.

**Some of our
great live
streaming
moments**

Matter XP

Brand

OnePlus.

Event

OnePlus handset launch.

Requirement

Noba streamed the event to 350,000 live viewers across all OnePlus social media platforms. Providing main and backup hardware, full project management and onsite team for the live event, we also provided enterprise grade main and backup internet connectivity for full redundancy.

Budget: £12,500

Live stream: £7,500 main and backup internet connection.

PRG

Brand

Aitch (music artist)

Event

Aitch - Polaris - Stay Home and Vibe #WithMe

Requirement

Live stream: £595 bonded LTE internet backup (main supplied by venue).

My Beautiful City

Brand

Versace

Event

Versus Versace Show

Requirement

Providing full streaming services, the Noba stream team delivered a 1080p live stream of the Versus Versace show from London's Old Truman Brewery in Shoreditch to all of Versace's social channels. Main internet connection was supplied by the venue whilst Noba provided a dedicated 10Mbps Satellite uplink for the backup connection.

Budget: £6,500

Live stream: £3,000 backup satellite broadband link.

Paria / FARZANEH

Brand

Paria /FARZANEH

Event

Fashion Show

Requirement

Noba were proud to support the truly unique Paria Farzaneh SS2021 show, part of 2021's London Fashion Week. Based in picturesque parkland in the Buckinghamshire countryside, the location for the show was a particularly challenging environment in terms of connectivity, offering zero coverage.

The Noba crew deployed our high gain directional LTE antennas and were able to provide a reliable 40Mbps/40Mbps bonded connection. With a dedicated 10Mbps satellite uplink setup in auto-failover mode, we delivered a highly reliable and fully redundant internet connection.

The Noba stream team were also onsite to provide a crystal clear 1080p live stream of the show direct to YouTube in order to extend the reach of the event. Using main and backup streaming hardware combined with main and backup internet connectivity, [the Paria Farzaneh SS2021 show](#) was in safe hands!

“This was another unique location for the Noba crew to get connected, but great fun and one to add to the growing portfolio”

Nick Taylor - Director

Speak to the Noba team about live streaming your next event.

Prices start from £2,000, streamed to YouTube,
including a rock solid internet connection.
